SayBetter: Smart Communication Assistant - MVP

📌 **Project Name:** *SayBetter: Smart Communication Assistant*

🎯 **Goal:**

Help users rewrite or generate better versions of their messages — be it professional emails, apologies, love letters, or even sarcastic comebacks — using the Gemini API as the brain.

🧩 **Core Features:**

1. **Message Input Box:**
   User types a rough draft or selects a message style.
2. **Tone Selector (Dropdown):**
   - Formal
   - Friendly
   - Apology
   - Persuasive
   - Sarcastic
   - Flirty 😄
3. **Gemini Prompt Generator (JS):**
   Use JS to generate structured prompts to send to Gemini API like:

   > "Rewrite this message in a persuasive and friendly tone: 'Hey, are you done with the report?'"

4. **Result Display Area:**
   Show Gemini's response with copy-to-clipboard button.
5. **Regenerate Option:**
   Ask Gemini for a different take with the same settings.

🧩 Optional Add-ons (Stretch Goals):

- **Local history of 5 messages** (stored in `localStorage`)
- **Simple theme switcher (Dark/Light)**
- **Responsive layout with Bootstrap or Tailwind**

🛠️ Tech Stack:

- **HTML/CSS** for structure and style
- **Vanilla JS** for interactivity and API integration
- **Google Gemini API** via `fetch()` for AI interaction (API key stored in `.env` or pasted manually for now in dev)

🚀 Why this is a good intern project:

- No backend needed
- Engages them with real-world AI API
- Teaches good UX/UI practices
- Playful + practical = higher engagement
- Can be demoed easily or even hosted on GitHub Pages
